

ARC.ITEC™ ENDOCABLE™

Water cooled cables inspectable by endoscopy
Control and optimize the lifetime of your cables

THE ENDOSCOPY CONCEPT

ENDOCABLE™ is **E.ITEC®**'s exclusive new design. The goal is to optimize the lifetime of the cables by inspection at site, without dismantling them.

The cables just have to be off voltage and water circuit disconnected.

The videoendoscope allows to visualize the condition of copper ropes over a length of 12 metres and to store photos or videos to keep precise and reliable records.

The videoendoscope is introduced through the water hole, the cables do not need to be emptied. Endoscopy is only possible with ENDOCABLE™.
